

ABSTRACT

There are provided an anti-aging composition, a
5 collagen production promoting composition, a collagen gel
contraction promoting composition, and an integrin
production promoting composition for promoting integrin
production in fibroblasts/epidermal cell, which have
improved collagen production promotion effect and are
effective for preventing or reducing wrinkle and/or
10 sagging caused by aging. These anti-aging composition
and promoting composition comprise, as an active
ingredient, a hydrogen peroxide-treated yeast
hydrolysate.
